

Frameworks, Libraries and Tools		
Transifex	The Transifex localization platform makes it easy to collect, translate and deliver digital content, web and mobile apps in multiple languages.	https://www.transifex.com/
Pusher	Pusher is a simple hosted API for quickly, easily and securely adding realtime bi-directional functionality via WebSockets to web and mobile apps, or any other Internet connected device.	https://pusher.com/
Polymer	Web Components usher in a new era of web development based on encapsulated and interoperable custom elements that extend HTML itself. Built atop these new standards, Polymer makes it easier and faster to create anything from a button to a complete application across desktop, mobile, and beyond.	https://www.polymer-project.org/
Bower	Bower is package manager for Web. It works by fetching and installing packages from all over, taking care of hunting, finding, downloading, and saving the stuff you're looking for. Bower keeps track of these packages in a manifest file, bower.json	http://bower.io/
Backbone	Backbone.js gives structure to web applications by providing models with key-value binding and custom events, collections with a rich API of enumerable functions, views with declarative event handling, and connects it all to your existing API over a RESTful JSON interface.	http://backbonejs.org/
Underscore	Underscore provides over 100 functions that support both your favorite workaday functional helpers: map, filter, invoke — as well as more specialized goodies: function binding, javascript templating, creating quick indexes, deep equality testing, and so on.	http://underscorejs.org/
Grunt	In one word: automation. The less work you have to do when performing repetitive tasks like minification, compilation, unit testing, linting, etc, the easier your job becomes. After you've configured it through a Gruntfile, a task runner can do most of that mundane work for you—and your team—with basically zero effort	http://gruntjs.com/
Yeoman	Yeoman helps you to kickstart new projects, prescribing best practices and tools to help you stay productive. To do so, we provide a generator ecosystem. A generator is basically a plugin that can be run with the `yo` command to scaffold complete projects or useful parts.	http://yeoman.io/
Heroku	Heroku makes the processes of deploying, configuring, scaling, tuning, and managing apps as simple and straightforward as possible	https://www.heroku.com/
Bootstrap	Bootstrap is the most popular HTML, CSS, and JS framework for developing responsive, mobile first projects on the web.	http://getbootstrap.com/
Kendo	Fast, light, complete: 70+ jQuery-based UI widgets in one powerful toolset. AngularJS integration, Bootstrap support, mobile controls, offline data solution.	http://www.telerik.com/kendo-ui
Bolierplae	A lean, mobile-friendly HTML template; optimized Google Analytics snippet; placeholder touch-device icon; and docs covering dozens of extra tips and tricks	https://html5boilerplate.com/
Html5please	Look up HTML5, CSS3, etc features, know if they are ready for use, and if so find out how you should use them – with polyfills, fallbacks or as they are.	http://html5please.com/
NodeJS	Node.js® is a platform built on Chrome's JavaScript runtime for easily building fast, scalable network applications. Node.js uses an event-driven, non-blocking I/O model that makes it lightweight and efficient, perfect for data-intensive real-time applications that run across distributed devices.	http://nodejs.org/
